CYBERSECURITY / IT

Cybersecurity-focused software development graduate with CompTIA Security+ and hands-on experience building and documenting an isolated security lab. Practical work includes network reconnaissance, packet analysis, vulnerability assessment, exploitation, Windows logging, SIEM, detection engineering, incident response, and Active Directory security.

EDUCATION

Bachelor of Science, Software Development | September 2026

Bellevue University — Bellevue, NE

Graduated with 4.0 GPA

Associate of Applied Science, Computer Programming | May 2024

Metropolitan Community College — Omaha, NE

Graduated with Honors

CERTIFICATION

CompTIA Security+ | 2026

CYBERSECURITY SKILLS

Security Tools: Nmap, Wireshark, Metasploit, Wazuh, Security Onion

Operating Systems: Kali Linux, Ubuntu, Windows

Networking: TCP/IP, Network Reconnaissance, Packet Analysis, Network Traffic Investigation

Security: Vulnerability Assessment, Web Application Security, Password Attacks, Windows Security Logging, SIEM, Detection Engineering, Incident Response, Active Directory Security

Frameworks: MITRE ATT&CK

Development: Java, Python, JavaScript, TypeScript, PHP, SQL, HTML, CSS

Tools: Git, GitHub, VirtualBox, VS Code

CYBERSECURITY HOME LAB

Labs 01–08 — Security Foundations

- Built an isolated virtual environment for controlled security testing.
- Performed network discovery, service enumeration, packet analysis, and vulnerability scanning.
- Conducted controlled exploitation, password attacks, and web application security testing.
- Documented procedures, evidence, findings, impact, limitations, and validation.

Labs 09–13 — Detection & Response

- Building SIEM and network monitoring workflows with Wazuh and Security Onion.
- Developing MITRE ATT&CK mapping, detection engineering, and incident response exercises.
- Analyzing host and network telemetry to develop investigation and detection skills.

Labs 14–16 — Active Directory

- Building an Active Directory environment for studying authentication, attack techniques, and defensive controls.
- Developing offensive and defensive exercises in an isolated virtual environment.

SOFTWARE PROJECTS

Moffat Bay — Team Capstone Project

- Collaborated on a database-driven application; designed portions of the database and developed much of the backend connectivity.
- **Technologies:** Java, SQL, GitHub

Horror Movie Database — Full-Stack Application

- Developing search, reviews, notes, watched/want-to-watch lists, and new-release functionality.
- **Technologies:** Web Development, SQL, APIs

Financial Data Tracker — Personal Project

- Developing a Python application that retrieves and processes external financial data through an API.
- **Technologies:** Python, REST API

PROFESSIONAL EXPERIENCE

Production Supervisor

Lozier Corporation — Omaha, NE | August 2025 – May 2026

- Used Oracle systems and dashboards to monitor production, quality, labor, inventory, and downtime data.
- Investigated operational issues using system data and metrics.
- Troubleshoot process and system-related problems in a high-volume manufacturing environment.

Warehouse / Distribution Lead

Lozier Corporation — Omaha, NE | March 2017 – August 2025

- Used Oracle, LOIS, Workday, and Excel in an enterprise operational environment.
- Analyzed data with filters, pivot tables, and VLOOKUP; investigated discrepancies.
- Monitored inventory, shipping, and quality information while coordinating daily operations.
