SOFTWARE DEVELOPER

Software development graduate with an A.A.S. in Computer Programming and B.S. in Software Development, combining formal training in programming, databases, software engineering, and cybersecurity with hands-on application development. Experience building Java and web-based applications, working with relational databases and APIs, and collaborating on team software projects. Strong analytical and problem-solving background developed through technical coursework, personal projects, and operational experience working with enterprise information systems and data.

EDUCATION

Bellevue University — Bellevue, NE

Bachelor of Science, Software Development | September 2026

Relevant coursework: Software Engineering, Secure Programming, Cybersecurity, Network Security, Database Design & Implementation

Metropolitan Community College — Omaha, NE

Associate of Applied Science, Computer Programming | May 2024

Graduated with Honors

TECHNICAL SKILLS

Languages: Java, Python, JavaScript, TypeScript, PHP, HTML, CSS, SQL, XML

Development: Object-Oriented Programming, Full-Stack Web Development, REST APIs, Database Integration, Application Development

Databases: MySQL, Relational Database Design, SQL Queries

Tools: Git, GitHub, VS Code, Microsoft Office, Excel

Systems: Windows, Linux, Ubuntu, Kali Linux, VirtualBox

Security: Secure Programming, Nmap, Wireshark, Metasploit, Wazuh, Security Onion

SOFTWARE PROJECTS

Moffat Bay — Team Capstone Project

- Collaborated with a three-person development team to build a database-driven web application.
- Designed and implemented portions of the relational database structure.
- Developed much of the backend database connectivity and application integration.
- Worked with GitHub for source control and team collaboration.
- Applied software engineering and database design principles throughout development.

Technologies: Java, SQL, Database Design, GitHub

Horror Movie Database — Full-Stack Application

- Developing a full-stack application for searching and managing movie information.

- Implemented functionality for movie searches, personal notes, reviews, watched lists, and want-to-watch lists.
- Designed application functionality around persistent user data and database interaction.
- Developing functionality to incorporate new-release information.

Technologies: Web Development, Database, SQL, APIs

Financial Data Tracker — Personal Project

- Developing an application for retrieving and working with external financial data.
- Integrated an external API to retrieve application data.
- Building functionality around processing, organizing, and presenting retrieved information.

Technologies: Python, REST API, Data Processing

PROFESSIONAL EXPERIENCE

Production Supervisor

Lozier Corporation — Omaha, NE | August 2025 – May 2026

- Used Oracle-based production and inventory systems to monitor operational data and production activity.
- Analyzed output, quality, labor, and downtime metrics to identify operational issues and improvement opportunities.
- Worked with system-generated dashboards and business data to support production decisions.
- Coordinated daily operations while troubleshooting process and system-related issues.
- Applied analytical and problem-solving skills in a high-volume manufacturing environment.

Warehouse / Distribution Lead

Lozier Corporation — Omaha, NE | March 2017 – August 2025

- Worked with Oracle, LOIS, Workday, and Excel to manage operational information and support distribution activities.
- Used Excel filtering, pivot tables, and VLOOKUP to analyze and organize business data.
- Monitored inventory availability, shipping schedules, and quality metrics.
- Coordinated daily work for a small team while maintaining accuracy and production requirements.
- Developed strong troubleshooting, analytical, and process-improvement skills in an enterprise environment.

CERTIFICATION

CompTIA Security+ | 2026
